

INSTRUCTIONS FOR ACTIVITY 3

Decision making and sustainability

1

Take a look at the second page of the instructions; there is a diagram that represent the decision making—process or take a look at the worksheet and follow the questions. You are a director of social enterprise and you would like to do something for sustainable development and consequently to reduce greenhouse gases.

2

Pretend to live in a big city, like Paris and you need to decide for transport. How will you come to work from one side of the town to the other. If you walk you need around 1h to do it, but you do not have that much time.

3

You need to look wide-angled; you can make this decision just for yourself but some day you could share it with to your employee, co-workers and friends and this is why you will take time.

4

Take a look from all perspectives – environmental, social and economic. See the alternatives and define them. Wisely choose the best alternative.
